PROFILE

I bring five years of experience delivering complex, cross-functional programmes at the intersection of data, AI, and business strategy, first at Deloitte, then leading a 1M+ EUR Customer Data Platform programme across 10+ markets in Europe and the Middle East at Nissan Motors Europe. My core strength is building structure where none exists. When Nissan needed to evaluate a new AI-assisted contract drafting tool for HR and legal, there was no framework in place, so I built one myself, defining risk classification, a structured sign-off process, and running a full pilot, before securing approval from a Director and the SVP Europe. I have hands-on experience with OneTrust, GDPR, and the EU AI Act, and I have directly managed team members within larger delivery programmes. Following Nissan's restructuring of its European operations, I am exploring opportunities across programme management, data governance, and AI governance, and I am open to relocating to India for the right role. I bring a genuine consulting foundation from my time at Deloitte, translating business needs into deliverable outcomes and communicating clearly with senior stakeholders throughout.

WORK EXPERIENCE

Business Intelligence & Customer Data Platform Lead

Feb 2023 – Present

Nissan Motors Europe, Budapest, Hungary

- Own a 1M+ EUR Customer Data Platform programme across 10+ markets in Europe and the Middle East, managing planning, stakeholder alignment, budget, and vendor collaboration.
- Led a formal AI governance assessment for an AI-assisted contract drafting tool used by HR and legal, building the risk classification framework and structured sign-off process from scratch, since nothing formal existed.
- Ran a structured 2 to 3 month pilot with a team in France, securing sign-off from a Director and the SVP Europe, and embedding human oversight into the workflow throughout.
- Worked hands-on with OneTrust following Nissan's migration to the platform, tracking DPIAs, requirement documents, and risk logs by project.
- Read into GDPR requirements around cross-border data transfer and the EU AI Act independently, ensuring governance decisions accounted for regulatory reality.
- Built automated Tableau reporting that cut manual effort by 30%, and directly managed a Tableau Developer and a Junior Business Analyst.
- Trained 20+ colleagues in SQL and self-service analytics, building lasting organisational capability.
- Scaled projects from pilot markets to full regional rollouts across G5 countries and the Middle East, delivering measurable business impact and ROI above industry benchmarks.

Business Intelligence Consultant

Feb 2021 – Feb 2023

Deloitte Consulting, Budapest, Hungary

- Delivered CRM and data transformation engagements for BMW and other clients within Deloitte's structured consulting governance framework.
- Applied Salesforce Einstein AI forecasting models on client engagements, an early version of the same question I later worked through at Nissan: where AI genuinely adds value, and where it introduces risk without enough benefit to justify it.
- Supported Deloitte Canada's COVID-19 vaccine distribution programme using Salesforce CRM, a fast-moving initiative with real regulatory and reporting consequences.
- Facilitated client workshops, translating complex business requirements into structured, deliverable plans.
- Prepared status reports and steering committee materials for senior client stakeholders, translating complex delivery detail into clear, decision-ready summaries.
- Automated reporting pipelines using Tableau Prep and ETL workflows, cutting manual effort by over 70% across client teams.

CORE SKILLS

- **AI & Data Governance:** Governance framework design from scratch, risk classification, hands-on OneTrust experience, EU AI Act, GDPR.
- **Programme Management:** End-to-end delivery, budget and vendor management, RAID logs, milestone tracking, executive reporting.
- **Stakeholder Management:** Cross-functional coordination, senior stakeholder communication, workshop facilitation.
- **Team Leadership:** Direct management and coaching, training delivery to 20+ colleagues.
- **AI & Technology:** Practical LLM understanding (Claude API, GPT-4), Claude Code, AI system lifecycle exposure.
- **Tools:** Tableau, Power BI, SQL, ETL pipelines, Salesforce CRM, AWS.
